

AXIS IP SECURITY CAMERAS

AXIS is the world market leader in network video products. They have been developing solutions that add value to data networks since 1984 and specifically, network video solutions since 1996. Axis was the first company to introduce a direct, network-attached camera in 1996.

The security of property and individuals is becoming an ever greater concern, bringing the need to provide 24/7 monitoring as both a deterrent and means of gathering evidence. Many organisations have already seen the benefits of deploying analogue CCTV cameras but the new generation of high definition, high performance digital IP security cameras provide more features, greater ease of deployment, higher quality pictures and enhanced storage and retrieval of images.

AXIS have a wide range of different cameras to suit a variety of applications, a selection of which are featured below:

AXIS 225FD Fixed Dome Network Camera

High-performance, progressive scan, day/night camera. Discreet, vandal-resistant and outdoor-proof design. Built-in heater and fan provide maximum protection in tough conditions. Crisp, clear images even of objects moving at high speed in the dark. Built-in Power over Ethernet allows the camera to receive both data and power over a single Ethernet cable, making installation easier and cheaper, and means that the camera can operate even when there is a power failure, if connected to a central Uninterruptible Power Supply (UPS).

AXIS 213PTZ Network Camera

Enables advanced remote monitoring with pan, tilt and zoom control. Features a powerful 26x optical zoom, auto focus lens and an IR mode for night time conditions. Delivers superior quality Motion JPEG and MPEG-4 video streams simultaneously. Provides 20 preset positions and 1 preset sequence to monitor specific areas. It also offers pre- and post-alarm image buffering and advanced event management features. Connects directly to an IP network, and with a built-in Web server, enables remote monitoring and control from any PC connected to the local area network or the Internet. Provides wide coverage with its ability to pan 340 degrees, tilt 100 degrees and zoom in on specific details. Ideal for monitoring people and property. A protective dome housing is available for indoor and outdoor applications.

AXIS IP Security Cameras have applications in a wide variety of different environments, including schools, universities, car parks, garages, subways, shopping centres and railway stations. In fact they can be used just about anywhere that there is a need to protect property from vandalism or wilful damage or prevent bullying, harassment or harm to individuals. The high quality images can be used to identify culprits and provide evidence that can be used at any subsequent investigation.

As an AXIS Approved Partner Electron have been trained to provide the highest quality advice on the deployment of AXIS IP Security Cameras, together with installation and full after sales service and support.
