

**CableSolve is the new cost effective way to manage your physical cable infrastructure. It is a unique portable solution to the problems companies face with IT Connectivity and infrastructure Management.**

Can you identify with any of the following?

- You have problems keeping track of your IT assets
- You do have some connectivity and infrastructure records, but they are not consolidated and they are not available wherever you are, whenever you need them
- Your company internal controls are getting stricter both in terms of asset tracking, and IT records and change management
- Your staff often run around trying to figure out what is connected to what
- Moving staff, especially large moves, takes far too long to plan and execute
- You wish you had a single place to go for all your IT infrastructure records
- Your infrastructure records quickly get out of date, even with frequent audits

If you said "Yes" to any of the above then **CableSolve** can provide a cost effective solution to managing your connectivity & infrastructure, and tracking and controlling your assets.

**CableSolve** is an advanced system that provides portable, end-to-end management, and documentation of the network connectivity and infrastructure of small to very large enterprises.

CableSolve is uniquely portable; it uses standard Pocket PC<sup>®</sup> technology to synchronise with a server database to give you up-to-date access to all your infrastructure information wherever and whenever you need it; no need to refer to printouts, or to find to a PC to look up information.

The Pocket PC, with optional bar-code scanning, makes data entry as simple as, well, scanning a bar-code!

CableSolve discovers, maps, tracks, and audits your assets. The combination of the Portable, Desktop and Network components provide a total solution.

Gartner estimates that up to 30% of a company's IT budget can be saved by complete IT asset management. IDC estimates that a 10% reduction in downtime and 20% reduction in helpdesk time can also be achieved.

CableSolve has been very successful with retrofit as well as new installations, and has proven capable of managing any environment, however diverse.

**Electron** can not only supply the solution but can also carry out a full audit of your cabling infrastructure, label your equipment and prepare your database, providing you with a 'ready-to-go' management tool, all at a very reasonable cost.

To find out more about communications cabling infrastructures call Electron on **0870 011 5456** or visit our website at [www.electron.co.uk](http://www.electron.co.uk) and click 'intelligent patching'.
